

Line Laser

Characteristics:

- Line laser with 28° opening angle
- Precise laser line module
- Laser beam in parallel to the housing
- Anodised Aluminium housing

Short description

The line laser generates a highly visible red line which is used to position or align objects. Due to the precise alignment of the laser line in the housing the line is positioned level. This is useful during assembly of the leaser or if a laser needs to be exchanged at any time later.

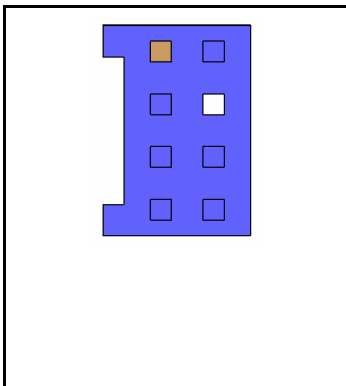

Technical Data

Line Laser		
Operating Voltage	4-6	V
max. operating current ¹⁾	< 50	mA
Optical power	< 1	mW
Laser class	2	
Electrical connector	DUBOX 2P	
Cable length	300	mm
Line angle	28	°
Wavelength	635	nm

At room temperature and normal use unless indicated

1) At minimal operating current

Electrical connection
