Accessories for our modules

Holders for laser diode module

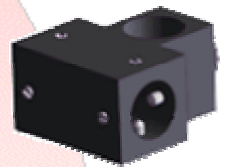

To complement our LDA and LDM modules we developed a range of practical holders. The modules can be adjusted in at least two planes (except Type 0023-04). The holders are executed in different precision ranges. Each type is adjusted differently however the design allows to reach the desired position with a few simple move. Each holder has specific features such as the fine adjustment system or height adjustment range

Characteristics:

- 0023-01: Very precise fine adjustment
- 0023-02: Precise alignment; fits standard rod Ø20
- 0023-03: Wide swivel angle ($\pm 20^\circ$), simple fixation
- 0023-04: Wide swivel angle ($\pm 30^\circ$), made in one piece

Beamexpander and Line optics

Beamexpander for laser module

Line optics for LDA and LDM modules

- CL = Line direction axially to module
- CLR = Line direction at right angle from module
