## New Laser line generator AL

### Adjustable Line laser for simple alignments

#### Characteristics:

- Two lines fixed\* at right angle and one line adjustable in parallel.
- Class 2M laser
- Power adaptor to EIAJ-standard
- Mains power adaptor available

This non- contact optical marking system for simple positioning or alignment tasks comes from the textile industry and is equally useful in the woodworking industry or in similar applications. The Alignment- laser projects two fixed laser lines at a right angle\* and a third which is infinite adjustable in parallel. In a typical application, the laser is used to position and align objects or it can be used for quality control to verify the correct location or alignment of an object.
