Laser on duty.....

The **SingleBeam Compact** laser is a truly unique tool, light weight, extrem small dimensions and sturdy. The SingleBeam Compact laser meets the increasing demands on target lasers to be of full usage

If required, other wavelengths and power settings are also available.

Some characteristics:

- Choice of wavelength from visible red to invisible
- On-Off Switch
- Laser axis fully adjustable
- Compact housing
- Standard commercial battery powered
- Adapters for most weapons available

whatever the conditions require. The desired wavelength laser beam can be selected from a range of basic laser sources. The insert can be adjusted in X and Y axis independently.

SingleBeam / Target designator

A must for commanders and support of special units guidance. The device is a hand held target designator which is especially suitable to guide troops on the ground from an elevated observation position or helicopter. The powerful laser beam is visible for a range of several kilometres. The observer points to the target on the ground and the ground troops are guided to find the otherwise hidden target. The device has adjustable output optics to vary the shape of the beam. It allows to first illuminate an area. Once a hidden target is identified, the beam can be collimated to a narrow point and becomes visible to the ground operating troops, pinpointing the exact location.

Some characteristics:

- Choice of Laser wavelength from red to infrared
- On / Off switch
- Activated by push button
- Laser Safety hazard Light
- Compact housing
- Standard commercial battery powered
- Wrist lash
