UPL Universal Laser for Pistols

UPL Laser pointer fits any pistol with grabber curb or picatinny rail

Laser systems for pistols are based on long experience in engineering and manufacturing of thousands of target lasers fielded from pistol to infantry rifles. The laser meets the high demands on sturdiness and availability generally required by the professional user. The standard supply visible 650 nm class 2 laser meets most purposes. Other wavelengths and power settings are available on request. The laser has a precise mechanism for fine X / Y-adjustment. The laser is attached to the pistol by a mechanically interlocked fixture especially developed for pistols with grabber rails such as picatinny or similar. The laser can be switched "ON" or "OFF" by flipping the switch to either side. This makes this laser suitable for right and left handed users. In the centre position, the laser is "off".

Available with other wavelengths or power setting.
