

ILEE announces a new partner

In order to offer you even more high tech products, we have build a new relationship with

ISO9001 certified

LightPath Technologies Inc. is a recognized leader in optical solutions for medical, industrial, communications, defence, test and measurement applications. Since 1985, LightPath has built a strong portfolio of optical components and technologies that serve these industries. LightPath not only supplies components, but also offers the ability to combine optical elements into a complete assembly, providing full engineering support for both optics and mechanics.

Products

Beside aspheric lens, optical assembly, isolators, collimators and traditional optics, offers LightPath GRADIUM® lenses.

GRADIUM® lenses are made from LightPath's proprietary axial gradient index glass. Its unique refractive qualities can be exploited to reduce spherical aberrations - resulting in performance similar to single term aspheres GRADIUM® lenses provide a cost-effective solution for many high-performance applications.

Beam comparison: Standard BK7- versus GRADIUM® lenses

Standard BK7 Plano-Convex Lens

GRADIUM® Singlet Lens
